1 Warnings

General Safety
- Never place your machine on a carpet covered floor. Otherwise, lack of airflow from below of your machine may cause electrical parts to overheat. This may cause problems with your washing machine.
- If the power cable or mains plug is damaged you must call Authorized Service for repair.
- Fit the drain hose into the discharge housing securely to prevent any water leakage and to allow machine to take in and discharge water as required. It is very important that the water intake and drain hoses are not folded, squeezed, or broken when the appliance is pushed into place after it is installed or cleaned.
- Your washing machine is designed to continue operating when the power restores after a power interruption. The machine will resume its program when the power restores. Press the "Start/Pause/Cancel" button for 3 seconds to cancel the program (See, Canceling a Program)
- There may be some water in your machine when you receive it. This is from the quality control process and is normal. It is not harmful to your machine.
- Some problems you may encounter may be caused by the infrastructure. Press "Start/Pause/Cancel" button for 3 seconds to cancel the program set in your machine before calling the authorized service.
- This appliance is not intended for use by persons (including children) with reduced physical, sensory or mental capabilities, or lack of experience and knowledge, unless they have been given supervises or instruction concerning use of the appliance by a person responsible for their safety.

First Use
- Carry out your first washing process without loading your machine and with detergent under "Cottons 90°C" program.
- Ensure that the cold and hot water connections are made correctly when installing your machine.
- If the current fuse or circuit breaker is less than 16 Amperes, please have a qualified electrician install a 16 Ampere fuse or circuit breaker.
- While using with or without a transformer, do not neglect to have the grounding installation laid by a qualified electrician. Our company shall not be liable for any damages that may arise when the machine is used on a line without grounding.

- Keep the packaging materials out of reach of children or dispose them by classifying according to waste directives.

Intended use
- This product has been designed for home use.
- The appliance may only be used for washing and rinsing of textiles that are marked accordingly.

Safety instructions
- This appliance must be connected to an earthed outlet protected by a fuse of suitable capacity.
- The supply and draining hoses must always be securely fastened and remain in an undamaged state.
- Fit the draining hose to a washbasin or bathtub securely before starting up your machine. There may be a risk of being scalded due to high washing temperatures!
- Never open the loading door or remove the filter while there is still water in the drum.
- Unplug the machine when it is not in use.
- Never wash down the appliance with a water hose! There is the risk of electric shock!
- Never touch the plug with wet hands. Do not operate the machine if the power cord or plug is damaged.
- For malfunctions that cannot be solved by information in the operating manual:
- Turn off the machine, unplug it, turn off the water tap and contact an authorized service agent. You may refer to your local agent or solid waste collection center in your municipality to learn how to dispose of your machine.

If there are children in your house...
- Keep children away from the machine when it is operating. Do not let them tamper with the machine.
- Close the loading door when you leave the area where the machine is located.
- Children of less than 3 years should be kept away unless continuously supervised.

2 Installation

Removing packaging reinforcement

Tilt the machine to remove the packaging reinforcement. Remove the packaging reinforcement by pulling the ribbon.

Opening the transportation locks

⚠ Transportation safety bolts must be removed before operating the washing machine! Otherwise, the machine will be damaged!
1. Loosen all the bolts with a spanner until they rotate freely ("C")
2. Remove transportation safety bolts by turning them gently.
3. Fit the covers (supplied in the bag with the Operation Manual) into the holes on the rear panel. ("P")

ⓘ Keep the transportation safety bolts in a safe place to reuse when the washing machine needs to be moved again in the future.
ⓘ Never move the appliance without the transportation safety bolts properly fixed in place!

Adjusting the feet

⚠ Do not use any tools to loosen the lock nuts. Otherwise, they can be damaged.
1. Manually (by hand) loosen the lock nuts on the feet.
2. Adjust them until the machine stands level and firmly.
3. Important: Tighten all lock nuts up again.

Connecting to the water supply.

Important:
• The water supply pressure required to run the machine must be 1-10 bar (0,1 – 1 MPa).
• Connect the special hoses supplied with the machine to the water intake valves on the machine.

• If you are going to use your double water-inlet machine as a single (cold) water-inlet unit, you must install the stopper*, supplied with your machine to the hot water valve.
• If you want to use both water inlets of the product, you can connect the hot water hose after removing the stopper and gasket group from the hot water valve.
* Applies for the products supplied with a blind stopper group.
• Models with a single water inlet should not be connected to the hot water tap.

When returning the appliance to its place after maintenance or cleaning, care should be taken not to fold, squeeze or block the hoses.

Connecting to the drain

The water discharge hose can be attached to the edge of a washbasin or bathtub. The drain hose should be firmly fitted into the drain as to not get out of its housing.
Important:
• The end of the drain hose must be directly connected to the wastewater drain or to the washbasin.
• The hose should be attached to a height of at least 40 cm, and 100 cm at most.
• In case the hose is elevated after laying it on the floor level or close to the ground (less than 40 cm above the ground), water discharge becomes more difficult and the laundry may come out wet.

• The hose should be pushed into the drainage for more than 15 cm. If it is too long you may have it shortened.
• The maximum length of the combined hoses must not be longer than 3.2 m.

Electrical connection

Connect the machine to an earthed outlet protected by a fuse of suitable capacity.

Important:
- Connection should comply with national regulations.
- The voltage and the allowed fuse protection are specified in the section "Technical Specifications".
- The specified voltage must be equal to your mains voltage.
- Connection via extension cords or multi-plugs should not be made.

⚠ A damaged power cable must be replaced by a qualified electrician.

⚠ The appliance must not be operated unless it is repaired! There is the risk of electric shock!

3 Initial preparations for washing

Preparing clothes for washing

Laundry items with metal attachments such as, bras, belt buckles and metal buttons will damage the machine. Remove metal attachments or place the items in a clothing bag, pillow case, or something similar.
- Sort the laundry according to type of fabric, color, and degree of soiling and permissible water temperature. Always follow the advice on the garment labels.
- Place small items like infants' socks and nylon stockings, etc. in a laundry bag, pillow case or something similar. This will also save your laundry from getting lost.
- Wash "machine washable" or "hand washable" labeled products only with an appropriate program.
- Do not wash colors and whites together. New, dark colored cottons may release a lot of dye. Wash them separately.
- Use only dyes/color changers and lime removers suitable for machine wash. Always follow the instructions on the packaging.
- Wash trousers and delicate clothes turned inside out.

Correct load capacity

ⓘ Please follow the information in the "Program Selection Table". Washing results will degrade when the machine is overloaded.

Loading door

The door locks during program operation and the Door Locked Symbol lights up. The door can be opened when the symbol fades out.
Detergents and softeners
Detergent Drawer

The detergent drawer is composed of three compartments:

The detergent dispenser may be in two different types according to the model of your machine.
- (I) for prewash
- (II) for main wash
- (III) siphon
- (✿) for softener

Detergent, softener and other cleaning agents

Add detergent and softener before starting the washing program.

Never open the detergent dispenser drawer while the washing program is running!

When using a program without pre-wash, no detergent should be put into the pre-wash compartment (Compartment no. I).
Detergent quantity

The amount of washing detergent to be used depends on the amount of laundry, the degree of soiling and water hardness.
- Do not use amounts exceeding the quantities recommended on the package to avoid problems of excessive foam, poor rinsing, financial savings and finally, environmental protection.
- Never exceed the (> max <) level marking; otherwise, the softener will be wasted without being used.
- Do not use liquid detergent if you want to wash using the time delay feature.

Figure 2

Turning the machine on
Plug in your machine. Turn the tap on completely. Check if the hoses are connected tightly. Place the laundry in the machine. Add detergent and softener. Press the "On/Off" button.

Program selection
Turn the Programme Selection Knob to the program mode that you wish to wash your laundry.

The recommended temperature and spin speed for the selected program appear. Press "Start/Pause/Cancel" button to start the program.

ℹ Sort the laundry according to type of fabric, color, degree of soiling and permissible water temperature when choosing a program.

5 - EN

Main programs
Depending on the type of textile, the following main programs are available:

• Cotton
You can wash your durable clothes with this program. Your laundry will be washed with vigorous washing movements during a longer washing cycle.

• Synthetics
You can wash your less durable clothes on this program. Lighter washing movements and shorter washing cycle is used compared to "Cottons" program. It is recommended for your synthetic clothes (such as shirts, blouses, synthetic/cotton blended garments, etc.). For curtains and lace, the "Synthetic 40" program with pre-wash and anti-creasing functions selected is recommended.

• Woollen
You can wash your machine-washable woolen garments on this program. Wash by selecting the proper temperature according to the labels of your clothes. It is recommended to use appropriate detergents for woolens.

Additional programs
For special cases, there are also extra programs available:

ⓘ Additional programs may differ according to the model of your machine.

• BabyProtect
Increased hygiene is provided by a longer heating period and an additional rinse cycle. It is recommended for baby clothes and clothes worn by allergic people.

• Delicate
You can wash your delicate clothes on this program. It has more sensitive washing movements and does not make intermediate spinning compared to "Synthetic" program.

• Hand wash
You can wash your woolen/delicate clothes that bear "not machine- washable" labels for which hand wash is recommended on this program. It washes the laundry with very tender washing movements without damaging your clothes.

• Xpress Super Short
You can use this program to quickly wash a small number of lightly soiled and unstained cotton garments. E.g.: bathrobes, duvet covers, sport wear, daily clothes and etc. used only once.

• Super 40
This program washes for a longer period at 40°C and gives the same result as the "Cottons 60°C" program, thus it saves energy. It is suitable for clothes for which you cannot use the "Cottons 60°C" program.

• Intensive
You can wash your durable and heavily soiled clothes on this program. In this program, your clothes will be washed for a longer time and an extra rinse cycle will be made compared to the "Cottons" program.

• Mix 40
You can use this program to wash cottons and synthetics together. There is no need to sort them.

Economy Symbol
Shows energy saving programs and temperature selections.

As "Intensive" and "Baby" programs are long programs with higher temperature selections to ensure hygiene, "Economy" Symbol will not light up.

Special programs
For specific applications, you can select any of the following programs:

• Rinse
This program is used when you want to rinse or starch separately.

• Spin
This program spins with maximum possible rpm in the default setting.

ⓘ You should use a lower spin speed for delicate laundries.

• Pump
This program is used to discharge the water of the clothes soaked into water in the machine.

Temperature selection
Whenever a new program is selected, the temperature anticipated for that program appears on the temperature indicator.

To change the temperature, press the "Temperature" button. Temperature decreases in 10° increments.

Cold selection is shown with "-" symbol.

90°C	Normally soiled, white cottons and linens.
60°C	Normally soiled, fade proof colored linens, cottons or synthetic clothes or lightly soiled white linens
40°C 30°C Cold	Blended clothes including synthetics and woolens as well as delicates.

Spin Speed selection
Whenever a new program is selected, the maximum spin speed of the selected program is displayed on the spin speed indicator.

To decrease the spin speed, press the "Spin" button. Spin speed decreases gradually. Then, rinse hold and no spin options are shown respectively.

Rinse hold is shown with "⌴⌴" and no spin is

shown with "▬▬" symbols.

If you do not want to unload your clothes immediately after the program, you may use the rinse hold function in order to prevent your clothes become wrinkled in an anhydrous condition. With this function, your laundry is kept in the final rinsing water. If you want to spin your laundry after the rinse hold function:

- Adjust the spin speed.
- Press "Start/Pause/Cancel" button. Program resumes. Your machine drains the water and spins your laundry.

You can use no spin function in order to drain the water without spinning at the end of the program.

Program selection and consumption table

EN Programme (°C)	Max. Load (kg)	Water Consumption (l)	Energy Consumption (kWh)	Auxiliary functions				Selectable temperature range °C
				Prewash	Quick Wash	PHR(Pet Hair Removal)	Anti-Creasing	
Cotton 90	5	47	1.80	•	•	•	•	90-cold
Cotton 60**	5	45	0.85	•	•	•	•	90-cold
Cotton 40	5	50	0.60	•	•	•	•	90-cold
Intensive 60	5	52	1.30				•	60-40
BabyProtect 90	5	40	1.80					90-30
Synthetics 60	2.5	40	0.90	•	•	•	•	60-cold
Synthetics 40	2.5	65	0.40	•	•	•	•	60-cold
Super 40	5	52	0.85					40
Mix 40	3	40	0.40	•	•	•	•	40-cold
Woollen 40	1.5	40	0.20					40-cold
Hand wash 30	1	30	0.15					30-cold
Daily Xpress 90	5	50	1.60					90-cold
Daily Xpress 60	5	50	1.00					90-cold
Daily Xpress 30	5	60	0.20					90-cold
Xpress Super Short 30	2	32	0.12					30-cold

• Selectable

* Automatically selected, not cancelable.

** Energy Label program (EN 60456)

Water and power consumption and programme duration may differ from the table shown, subject to changes in water pressure, water hardness and temperature, ambient temperature, type and amount of laundry, selection of auxiliary functions, and fluctuations in the supply voltage.

"Super 40" program may be!selected instead of "Cotton 60" programme during winter in areas where the input water temperature is low and/or in areas with low supply voltage.

ⓘ The auxiliary functions in the table may differ according to the model of your machine.

ⓘ Programme duration will be displayed on the screen of your machine according to your selection.

Auxiliary functions
Auxiliary function selection keys
Select the required auxiliary functions before starting the program.

ⓘ Auxiliary function buttons may differ according to the model of your machine.

Auxiliary function selection
If an auxiliary function that should not be selected together with a previously selected function is chosen, the first selected function will be cancelled and the last auxiliary function selection will remain active.

For example: If you want to select pre-wash first and then quick wash, pre-wash will be cancelled and quick wash will remain active.

Auxiliary function that is not compatible with the program cannot be selected. (see "Program Selection Table")

• Prewash
A pre-wash is only worthwhile for heavily soiled laundry. Without pre-wash you save energy, water, detergent and time. Pre-wash without detergent is recommended for lace and curtains.

• Rinse Plus
With this function, you can increase the number of current rinsing steps. Thus, sensitive skins' risk of being affected by the remainder detergent on the clothes will be decreased.

• Rinse Hold
If you do not want to unload your clothes immediately after the cotton, synthetics, woolen and delicate fabrics program, you may release your clothes inside the machine in the last rinsing water by pressing the rinse hold button in order to prevent your clothes become wrinkled. After this process you may spin your laundry by pressing "Start/Pause/Cancel" button or you may end the program by pressing "Start/Pause/Cancel" button for 3 sec.

- In the machines equipped with spin speed selection knob or button, you can spin by selecting the desired spin speed and press "Start/Pause/Cancel" button.
- As for machines not equipped with a spin speed selection knob, you can end the program without a spin cycle by pressing the "Start/Pause/Cancel" button and draining the water. If you wish your clothes be spun, you can spin them by selecting "pump+spin" program.

If you wish to wash your clothes in cold water, you can use this program.

• No Spin
You may use this program if you do not want to spin your clothes at the end of cottons, synthetics, woolen or delicate programs.

• Spin speed reduction
You may use the speed reduction button whenever you wish to spin your clothes below the maximum spin speed. When speed reduction button is pressed, spin speed will be at the minimum rpm given on the panel.

• Pet hair removal
This function helps you to remove the pet hairs that remain on your clothes.

When this function is selected, your machine adds pre-wash and additional rinsing steps to the normal program cycle. Thus, pet hairs are removed more effectively by performing the washing with more water (30%).

⚠ Never wash your pets in your washing machine.

Starting the Program
Press "Start/Pause/Cancel" button to start the program. "Start/Pause/Cancel" button will light up to indicate that the program has started. The door is locked and the "Lid" light fades.

Progressing a program
Progress of a running program is shown through the program follow-up indicator. At the beginning of every program step, the relevant indicator lamp will light up and light of the completed step will turn off.

ⓘ If the machine is not spinning, the program may be in rinse hold mode or the automatic spin correction system has been activated because of excessive unbalanced distribution of laundry in the machine.

Changing the selections after the program has started
You can use this feature after your machine has started to wash different textile groups in the same batch of clothes under higher or lower temperatures. You must cancel the ongoing program in order to change the washing program.

For example, press and hold the "Start/Pause/Cancel" button for 3 seconds to "Cancel" the program in order to select "Cottons 40" program instead of "Cottons 60" program. Select the "Cottons 40" program by rotating the program knob. Press "Start/Pause/Cancel" button to start the program.

Switching the machine to standby mode
Press "Start/Pause/Cancel" button momentarily to switch your machine to the standby mode. Auxiliary functions can be

cancelled or selected in accordance with the step the program is at. The door can be opened if the water level is suitable. Laundry may be added / taken out by opening the door.

Child-proof lock

You can protect the appliance from being tampered by children by means of the child-proof lock. In this case, no change can be made in the running program.

This function protects the appliance from being tampered by children. In this case, all of the buttons are inactive except On/Off button; by On/Off button you can whether stop or resume (while child-lock on) the program of your machine.

The machine is switched to child-lock by pressing the 1st and 2nd auxiliary functions from the left for 3 sec. 1st auxiliary function light will flash continuously. To deactivate the child-proof lock, press the same buttons for 3 sec.

Ending the program through canceling

In order to cancel the selected program, press the "Start/Pause/Cancel" button for 3 seconds. The machine starts to discharge the water. "Wash" and "Program Finished" lights will light up. "Start/Pause/Cancel" and "Wash" lights will go off after discharging process is over and the "Lid" light will start flashing. "Lid" lamp will light up continuously when the door is unlocked.

If the program is cancelled in the middle of the process, "Wash" and "Program Finished" lights will light up. The machine can drain all the water or can take in water for 3 times at most to cool down the clothes and complete draining process. When the water discharging process is completed, the "Wash" light will go off, the "Program Finished" light will light up and the "Lid" light will continuously flash until the door is unlocked.

End of program

The "Program Finished" lamp on the program follow-up indicator will light up when the program comes to an end. The lid is unlocked 2 minutes later, the "Program Finished" and "Lid" lamps will light up continuously. The machine is now ready for a second cycle.

If any key is pressed when the machine is at the end of the program or if the position of the selection knob is changed, the "Program Finished" light will go off and only the "Lid" lamp will remain as lit. If the door is still locked, the "Lid" light will continue flashing until the door is unlocked.
Press the "On/Off" button to shut down the machine.

5 Maintenance and cleaning

Detergent Drawer

Remove any powder residue buildup in the drawer. To do this;

1. Press the dotted point on the siphon in the softener compartment and pull towards you until the compartment is removed from the machine.

🄸 If more than a normal amount of water and softener mixture starts to gather in the softener compartment, the siphon must be cleaned.

2. Wash the dispenser drawer and the siphon with plenty of lukewarm water in a washbasin.
3. Replace the drawer into its housing after cleaning. Check if the siphon is in its original location.

Inlet water filters

There is a filter at the end of each water intake valve at the back side of the machine and also at the end of each water intake hose where they are connected to the tap. These filters prevent the foreign substances and dirt in the water to enter into the machine. Filters should be cleaned as they get dirty.

• Close the taps.

• Remove the nuts of the water intake hoses to clean the surfaces of the filters on the water intake valves with an appropriate brush.
• If the filters are very dirty, you can pull them out by means of pliers and clean them.
• Take out the filters on the flat ends of the water intake hoses together with the gaskets and clean thoroughly under streaming water.
• Replace the gaskets and filters carefully to their places and tighten the hose nuts by hand.

Draining any remaining water and cleaning the pump filter

Your product is equipped with a filter system which ensures a cleaner water discharge that extends pump life by preventing solid items such as buttons, coins and fabric fibers from clogging the pump propeller during discharge of the washing water.

• If your machine fails to drain the water, the pump filter may be clogged. You may have to clean it every 2 years or whenever it is plugged. Water must be drained off to clean the pump filter.

In addition, water may have to be drained off completely in the following cases:

• before transporting the machine (e.g. when moving house)

• when there is the danger of frost

In order to clean the dirty filter and discharge the water;

1- Unplug the machine to cut off the supply power.

⚠ There may be water at 90°C in the machine. Therefore, the filter must be cleaned only after the inside water is cooled down to avoid hazard of scalding.

2- Open the filter cap. The filter cap may be composed of one or two pieces according to the model of your machine.
If it is composed of two pieces, press the tab on the filter cap downwards and pull the piece out towards yourself.

If it is composed of one piece, hold it from both sides and open it by pulling out.

3- An emergency drain hose is supplied with some of our models. Others are not supplied with this item.

If your product is supplied with an emergency drain hose, do the following as shown in the figure below:

• Pull out the pump outlet hose from its housing.

• Place a large container at the end of the hose. Drain the water off into the container by pulling out the plug at the end of the hose. If the amount of water to be drained off is greater than the volume of the container, replace the plug, pour the water out, then resume the draining process.

• After draining process is completed, replace the plug into the end of the hose and fit the hose back into its place.

If your product is not supplied with an emergency drain hose, do the following as shown in the figure below:

• Place a large container in front of the filter to receive water flowing from the filter.

• Loosen pump filter (anticlockwise) until water starts to flow out of it. Direct the flowing water into the container you have placed in front of the filter. You can use a piece of cloth to absorb any spilled water.

• When there is no water left, turn the pump filter until it is completely loose and remove it.

• Clean any residues inside the filter as well as fibers, if any, around the propeller region.

• If your product has a water jet feature, be sure to fit the filter into its housing in the pump. Never force the filter while replacing it into its housing. Fit the filter fully into its housing; otherwise, water may leak from the filter cap.

4- Close the filter cap.

Close the two-piece filter cap of your product by pushing the tab on it.

Close the one-piece filter cap of your product by fitting the tabs on the bottom into their positions and pushing the upper part of it.

6 Solution suggestions for problems

Cause	Explanation / Suggestion
Program cannot be started or selected.	
• Machine may have switched to self protection mode due to an infrastructure problem (such as line voltage, water pressure, etc.).	• Reset your machine by pressing "Start/ Pause/Cancel" button for 3 seconds. (see, Canceling a Program)
There is water coming from the bottom of the machine.	
• There might be problems with hoses or the pump filter.	• Be sure the seals of the water inlet hoses are securely fitted. • Tightly attach the drain hose to the tap. • Make sure that the pump filter is completely closed.
Machine stopped shortly after the program started.	
• Machine can stop temporarily due to low voltage.	• It will resume operating when the voltage is back to the normal level.
It continuously spins. Remaining time does not count down. (For models with a display)	
• There may be an imbalance of laundry in the machine.	• The automatic spin correction system might have been activated due to the unbalanced distribution of the laundry in the drum. • The laundry in the drum may be clustered (bundled laundry in a bag). Laundry should be rearranged and re-spun. • No spinning is performed when the laundry is not evenly distributed in the drum to prevent any damage to the machine and to its environment.
It continuously washes. Remaining time does not count down. (For models with a display)	
• In the case of a paused countdown while taking in water: • Timer will not countdown until the machine is filled with the correct amount of water.	• The machine will wait until there is a sufficient amount of water to avoid poor washing results due to lack of water. Then the timer will start to count down.
• In the case of a paused countdown at the heating step: • Time will not count down until the selected temperature for the program is reached	
• In the case of a paused countdown at the spinning step: • There may be an imbalance of laundry in the machine.	• The automatic spin correction system might have been activated due to the unbalanced distribution of the laundry in the drum. • The laundry in the drum may be clustered (bundled laundry in a bag). Laundry should be rearranged and re-spun. • No spinning is performed when the laundry is not evenly distributed in the drum to prevent any damage to the machine and to its environment.
There is foaming over the detergent drawer	
• Too much detergent was used.	• Mix 1 tablespoonful softener and ½ liter water and pour into the main wash compartment of the detergent drawer.

7 Specifications

Models	WCB 75107	WCB 75087	WCL 75107	WCL 75087
Maximum dry laundry capacity (kg)	5	5	5	5
Height (cm)	84	84	84	84
Width (cm)	60	60	60	60
Depth (cm)	48	48	48	48
Net Weight (kg)	59	59	59	59
Electricity (V/Hz.)	230 V / 50Hz			
Total Current (A)	10	10	10	10
Total Power (W)	2200	2200	2200	2200
Spinning cycle (rpm max.)	1000	800	1000	800

Specifications of this appliance may change without notice to improve the quality of the `product`. Figures in this manual are schematic and may not match your product exactly.

Values stated on the machine labels or in the documentation accompanying it are obtained in laboratory in accordance with the relevant standards. Depending on operational and environmental conditions of the appliance, values may vary.

This appliance's packaging material is recyclable. Help recycle it and protect the environment by dropping it off in the municipal receptacles provided for this purpose. Your appliance also contains a great amount of recyclable material. It is marked with this label to indicate the used appliances that should not be mixed with other waste. This way, the appliance recycling organised by your manufacturer will be done under the best possible conditions, in compliance with European Directive 2002/96/EC on Waste Electrical and Electronic Equipment. Contact your town hall or your retailer for the used appliance collection points closest to your home. We thank you doing your part to protect the environment.
